Security Hypervision

Increase your monitoring capabilities with the Panorama E2 Security Pack

Boost efficiency with a unified view of your different monitoring systems

By installing a Hypervision application dedicated to safety/security, you will acquire a new, more commanding 360° view of your building and/or facility. Take SCADA to a new level with instant, dynamic correlation between your operating data and information from your third-party systems. As a result, your capabilities of monitoring, anticipation and response grow. Critical infrastructures & industries, museums, national defense, detention centers, Smart Buildings, etc. - the potential applications are countless and wide-ranging.

Through your unified Hypervision system, you can integrate BMS/FM/DCIM & CCTV systems, access control, intercom, intrusion and fire detection systems, and many more.

Independent

Maintain your independence from your fleet of systems and/or equipment

Open

Adopt a solution that allows you to interface with the other systems within your information ecosystem (CMMS, SIEM, GIS, etc.)
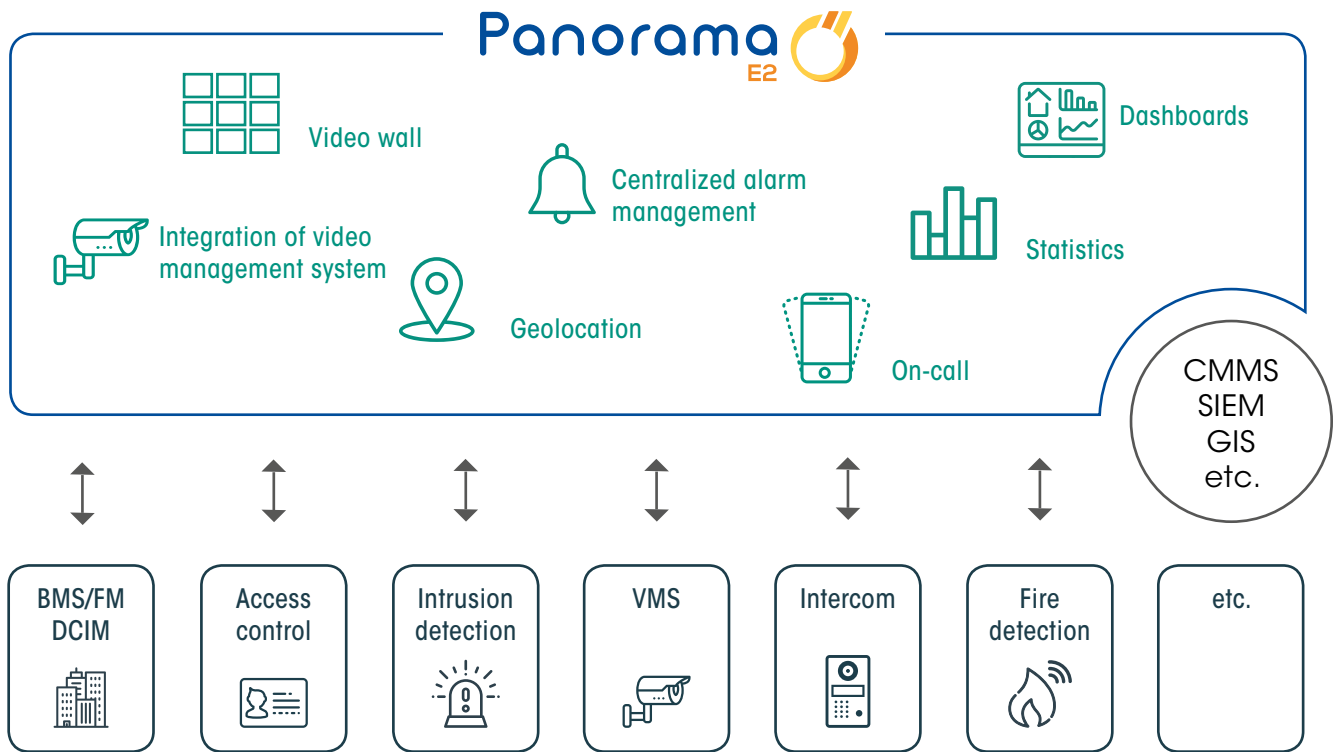

Secure

Choose a robust solution with ANSSI-certified cyber security mechanisms

By implementing a centralized Hypervision application of this type, you optimize your analytical capacity and responsiveness. The Security Pack works as a seamless, powerful add-on to Panorama E2, and offers simplified and unified management for the enhanced security and safety of your facilities.
