PRAYON

INDUSTRY

Integrator
ASSYSTEM

Prayon is the world leader in the production of phosphates for food processing and industrial applications. All the products of this Belgian company meet European legislation requirements and the company runs a strict management system guaranteeing compliance through multiple certifications (ISO, OHSAS, FSSC, IFA, AEO).

Aim

With an aging industrial computing base (PLCs and SCADA), Prayon chose to undertake a full revamp of its infrastructure at its Saint-Clair-du-Rhône site in southern France. In view of the considerable investment required, the company wanted to use this opportunity to move to scalable, long-term solutions to improve competitiveness and optimize the total cost of ownership of its facilities.

Solution

As part of the project to modernize the site, Prayon in conjunction with integrator partner Assystem, opted for the Panorama SCADA platform to replace the legacy solution. Prayon has thus chosen an open, secure, interoperable solution that is independent of hardware manufacturers in order to maintain the company's full control over its future investment choices.

Customer benefits

Optimized productivity based on a high-performance platform offering a wide range of functions. Panorama Suite's highly modular architecture will also allow Prayon to scale its applications according to operational needs, while ensuring that existing applications continue to be supported long into the future.
